

table saw **Outfeed Support**

This easy-to-build addition to your table saw takes the hassle out of cutting long boards and sheet goods.

■ Adding an outfeed support to your table saw is like gaining an extra pair of hands in the shop. It provides sturdy support whether you're ripping a long board or cutting plywood down to size.

The outfeed support shown in the photo provides this plus a few key features. For instance, slots in the top allow you to use your miter gauge without removing it.

A leveler at the end of each leg lets you make fine height adjustments. This means you can align the top to your saw table to compensate for any unevenness in the floor of your shop.

To connect the outfeed support to your table saw, cleats hook over a wood rail on the back rail of the saw. (I've included mounting options for the two most common types of fence arrangements.) And since the legs fold up, the support table can be quickly removed and hung on the wall for storage.
